

**DESCRIPTION:****Liquid Intelligents 203 Diesel Winterised Additive.**

Liquid Intelligents 203 additive system is to prevent winter diesel fuel problems such as filter plugging caused by fuel gelling and icing. Our anti-gel formulas contain proprietary wax crystal modifiers; cold flow improvers, heavy wax modifiers, and wax anti-settling properties. This prevents formation of large wax crystals that plug filters and shut engines down.

Cold Temperature Operability

This advanced system of antigel components provides superior improvement of cold temperature operability on a wide range of today's hard to treat low and high sulphur distillate fuels. Liquid Intelligents 203 antigel can provide improved cold temperature operability equalling up to a 70% blend of No.1 (Kerosene). Proper use of Liquid Intelligents 203 antigel additives can:

- Reduce the cold filter plug point up to 0 C_o degrees.
- Reduce the pour point as low as -45 C_o degrees or more.

Additional Benefits

Liquid Intelligents 203 additional benefits include better lubricity, moisture dispersancy, and enhancement with cetane improver, detergents and other components to produce a true "winterised" premium diesel fuel.

APPLICATION

To keep fuel tanks free of wax, treat with Liquid Intelligents 203 at the recommended maintenance treatment (see chart below) ratio every fill.

Liquid Intelligents 203	<u>MAINTENANCE TREATMENT</u>
500mls	300litres
1litre	600 litres
